# ACCEPTED MEAT AND POULTRY EQUIPMENT

## Introduction

The Federal Meat Inspection Act and the Poultry Products Inspection Act require the Secretary of Agriculture to see that meat and poultry are processed under sanitary conditions. These laws authorize the Secretary to make regulations necessary to bring about this objective. Such regulations are published in the Code of Federal Regulations. They provide the rules that apply to sanitation of facilities and equipment in federally inspected plants.

The Equipment Group, Technical Services, Food Safety and Quality Service, U.S. Department of Agriculture, Washington, D.C. 20250, has been assigned responsibility for the review of plant equipment, including materials used in its construction, and provisions for its sanitary maintenance in proposed use. Basically, concern is sanitary design, construction, installation and maintenance. The Equipment Group will, however, not accept, equipment unless its operation and output meet certain Program requirements--even though it may be of sanitary design and construction.

## Freedom of Information

The Freedom of Information Act, 5 U.S.C. 552, provides that information in the possession of the Federal Government must be made public upon request unless certain specified exemptions apply. One of these exemptions covers "trade secrets and commercial or financial information obtained from a person and privileged and confidential" (5 U.S.C. 552(b)(4)).

In order to protect the legitimate commercial interests of those submitting information to the Equipment Group, the submitting party should carefully identify all material considered to be either a trade secret or confidential commercial or financial information. The submitter should also supply a statement giving the reasons the information is so considered. While this procedure will not guarantee that information so identified will be exempt from disclosure, it will insure that the wishes of the submitting party will be given consideration in any decision reached.

When third party requests for material identified as a trade secret or confidential commercial or financial information are received by FSQS, the material will not be disclosed without consulting the submitting party.

If there are any questions concerning the Freedom of Information Act and its effect on the procedures of the Equipment Group, they should be addressed to:

Freedom of Information Act Coordinator  
Food Safety and Quality Service  
Room 334-E  
U.S. Department of Agriculture  
Washington, D.C. 20250

## Equipment Acceptance Program

Purposes. The purpose of this program is to assure that sanitary, properly designed and constructed equipment is used in federally inspected meat and poultry plants. It is aimed at seeing that equipment is built right in the first place rather than at correcting problems after they become apparent. This approach has definite advantages for the consumer, the equipment manufacturer, the processor, and the inspection service.

Scope. Equipment introduced into official establishments must be formally evaluated and accepted by the Equipment Group before it is used to produce edible product on a regular basis. This applies to used as well as new equipment.

Presently installed equipment that can produce unadulterated product and be kept clean need not be presented to the Equipment Group for formal acceptance. It must, however, be acceptable to the inspector in charge at the point of use.

The following categories of equipment need not be submitted for formal acceptance if constructed, installed, and maintained in a manner acceptable to the inspector in charge:

1. Simple hand tools.
2. Equipment used for preparing packaging materials.
3. Equipment for handling or transporting packaged goods.
4. Equipment used in inedible departments.
5. Central cleaning systems.
6. Utensil and equipment cleaning machinery.
7. Pails, buckets, etc. (chemical acceptance for plastics, if used).
8. Pallets for packaged product.
9. Picking Fingers (chemical acceptance only).
10. Tanks for finished oils.
11. Can openers.
12. Chutes, flumes, poultry hang back racks, supporting stands, and brackets.
13. Equipment used for storing, transporting, and refining rendered animal fats and vegetable oils.
14. Vegetable cleaning equipment.
15. Insect control units.
16. Shipping containers (to be approved by Labels and Packaging Staff, MPIP, FSQS, USDA, Cotton Annex Building, Washington, D.C. 20250).
17. Pressure storage vessels for refrigerants.
18. Water softeners, water heaters, water meters, and chemical dispensers.
19. Can and jar washers/cleaners.
20. Dry spice mixing equipment.
21. Hot air shrink tunnels.
22. Equipment for handling live poultry and meat animals.
23. Air and water filters.
24. Temperature recording equipment (chemical and sanitary acceptance of product contact components only).
25. Casing preparation equipment.

#### **Plants Coming Under Inspection**

Equipment that is in existing plants at the time inspection is inaugurated need not be cleared through formal acceptance procedures if the equipment is in good repair and is installed and maintained in a manner acceptable to the inspector in charge. Equipment intended for use in newly constructed plants must be on the accepted list at the time inspection is inaugurated or installed on an experimental basis under special permission from the Equipment Group.

### **Equipment Other Than That Commercially Available**

Many plants make some of their own equipment or have it fabricated for them to their own specifications. Simple equipment in this category such as racks, skinning cradles, etc., need not be submitted for formal acceptance. It must, however, meet the standards stated in this pamphlet. More complex equipment, such as conveyors, mixers, packaging equipment, must be cleared by the Equipment Group even though custom-made for the plant and not intended for sale or lease to others. The Equipment Group will evaluate such equipment using the same standards and requiring such information (drawings, parts materials lists, etc.) that apply to equipment that is commercially made. The custom equipment, however, will not be listed in the accepted equipment list.

### **Transfer of Used Equipment Between Plants**

Equipment that has been used in federally inspected plants may be moved to another federally inspected plant under the same ownership without formal acceptance, if it is in good repair, and in the judgment of the inspector in charge at the receiving establishment can produce unadulterated product and is installed and maintained in a manner acceptable to him.

### **Bakery Equipment**

Equipment introduced into processing departments to prepare dough and crust for filling or fabricating operations must be formally evaluated and accepted. Equipment used in separate rooms for preparing bakery type items need not appear on the accepted list. The inspector in charge will judge whether such equipment is constructed and maintained in a manner that will permit production of unadulterated product in a clean environment. All of the standards applying to meat or poultry processing equipment will not apply to bakery equipment used in bakery departments since such equipment may not require daily washing to be maintained in an acceptable sanitary condition.

### **Procedure for Obtaining Equipment Acceptance**

The person interested in securing acceptance should provide the Equipment Group with drawings which clearly illustrate the main construction features of the equipment. These usually consist of side views, end views and top views. More complex equipment will require section or cutaway drawings showing internal product contact parts. A list, correlated to the drawings, showing the materials of which the parts are made must accompany each submittal. Any part that is plated should be so annotated with the type of plating material specified. If paints or plastics are used, they must be cleared with the Chemistry Staff, Scientific Services. The drawings and chemical formulas should be sent to:

Equipment Group, Technical Services  
MPIP, FSQS, USDA  
Washington, D.C. 20250

The drawings need not be drawn to a specific scale. However, they should not exceed 32" x 48" in size since the Equipment Group reduces the drawings to microfilm and this is the largest size that the microfilm equipment can handle.

The Equipment Group will review the information presented to determine (1) if acceptable materials are used, (2) if there are design, construction or safety problems that must be corrected, and (3) if observation during use in a plant is necessary to determine acceptability.

If a production trial is considered necessary for observing the equipment during in-plant use, the equipment manufacturer should ask the plant to request permission of the Equipment Group for use of the equipment on a trial basis. The MPI representative at the plant will be notified if permission is granted and will evaluate the operation of the equipment and report his findings to the Equipment Group. If the report is favorable, the company will be permitted to continue use of the machine after the experimental period is completed unless notified otherwise by the Equipment Group. If sanitary or safety problems are identified during the trial period, they must be corrected before continued use is permitted.

If the equipment has performed satisfactorily, the Equipment Group will furnish the proponent a letter of acceptance and add the model to the listing of accepted equipment that is published periodically. If the equipment is not accepted, the manufacturer and user will be advised of the elements needing correction. The acceptance letter, when written, is intended to clarify equipment status prior to its listing. Once the equipment is listed, the letter written to the manufacturer becomes invalid and no longer useful as an authorization for equipment installation and use in plants.

#### Chemical Clearance

Compounds such as sealants, coatings, paints, metal alloys, and plastics used as components of equipment must be cleared with the Equipment Group, to assure that they are nontoxic and safe for the proposed use. The following information is needed:

1. Brand name or specific description with manufacturer's name.
2. Description of the conditions of its use.
3. List of substances of which the material is composed.

The list of substances must identify all major and minor constituents by proper chemical name as they appear in the appropriate Food Additives Regulation. Dyes and pigments should be identified by Color Index number or structural formula. Components identified only by their manufacturer's brand name or code must also have FSQS acceptance. The supplier or manufacturer should be prepared to verify acceptance of their product to buyers and inspectors.

#### Listing of Accepted Equipment

Periodically, technical Services will publish an updated list of equipment that is acceptable for use in federally inspected meat and poultry plants. Inspectors use this list to determine the status of new or replacement equipment intended for use in plants.

Formal acceptance of a piece of equipment will not necessarily mean that it can be used without reservation. Poor quality workmanship, inadequate service and maintenance, substitution of materials, faulty installation, or other defects may make an otherwise acceptable machine unacceptable. When such defects can be corrected after installation, the inspector will require correction as a condition for use.

Otherwise, the equipment will be rejected and the inspector will report the defects to the Equipment Group.

Experience with equipment in use may reveal objectionable defects or faults that were not apparent when acceptance was extended. If the defects are serious and the manufacturer cannot or will not make corrections, the equipment in question will be removed from the accepted list.

The Food Safety and Quality Service does not issue or sanction the use in advertisements or otherwise of any shield, emblem, legend, or insignia indicating acceptance of equipment. The only authorized reference to acceptance is in letters issued to applicants and in the list of accepted equipment published periodically by Technical Services. Publication in this list means that the equipment has been evaluated and found to comply with Meat and Poultry Inspection Program sanitary standards. It does not imply compliance with Department of Labor Occupational Safety and Health Standards.

Listed model numbers followed by dots indicate that a particular piece may be made in various sizes and capacities with no change in the basic design and construction.

#### EXAMPLE

<u>Equipment</u>	<u>Model Number</u>	<u>As Shown in Equipment list</u>
CONVEYOR	EC-1218	EC - . . . .
	or	
	EC-2435	Basic Design Width Length
	or	
	EC-2060	

#### Equipment Standards

To be considered acceptable, equipment and utensils must meet certain basic criteria. They must be made of acceptable materials, must be constructed so they can be cleaned and inspected, must be designed for sanitary maintenance, and must not constitute a safety or health hazard to inspectors.

##### 1--Acceptable Materials:

Equipment must be constructed of materials capable of preventing deterioration through normal use or deterioration by chemicals, cleaning agents, and atmospheric exposure in the normal production environment. They must be smooth surfaced, corrosion and abrasion resistant, shatterproof, nontoxic, nonabsorbent, and shall not stain or migrate to the product.

A. Stainless Steel: The 18-8 (300 series) is acceptable for general use. There are other series which have been used for construction of meat and poultry equipment, but their use is limited because they tend to rust or discolor in certain applications. The abbreviation "S/S" is used throughout this publication to denote stainless steel construction.

B. Aluminum: May pit or corrode when exposed to certain chemicals. When friction occurs between aluminum and meat or fat, a black oxide is produced which

discolors the meat. Anodizing the aluminum does not eliminate this problem. Therefore, the use of aluminum is limited to applications where the metal does not contact the product or in which the product is suspended in water.

C. Surface Coatings and Platings: Are acceptable providing they render the base metal noncorrosive and meet the definition for an acceptable material. Failure of plating materials to remain intact is justification for inspection personnel to require that the use of equipment so affected be discontinued. Such platings as chromium, nickel, tin, and zinc (as galvanized iron) are usually acceptable, depending upon the specific use.

D. Plastics and Metal Alloys: Are acceptable when judged by the Chemistry Staff to be suitable for contacting product and are physically acceptable for their intended use by the Equipment Group.

E. Hardwood: Is acceptable when used as removable cutting boards or as removable racks for dry curing meat. Since wood absorbs moisture, it is unacceptable for any other equipment uses.

F. Other Materials: As new materials are developed and proposed, they will be considered on their merits.

## 2--Unacceptable Materials:

A. Cadmium and Antimony: Are toxic materials and may not be used in any manner on equipment for handling edible product.

B. Lead: Is a toxic material and may not be used in equipment contacting edible product except that it may be employed in certain alloys in an amount not to exceed 5 percent.

C. Enamelware and Porcelain: Are not acceptable for any purpose in connection with the handling and processing of product.

D. Copper, Brass, and Bronze: Are not acceptable when used in contact with fats and oils, because their use results in objectionable greenish discoloration and decreases keeping quality of fat. They may be used in air and water lines and for gears and bushings outside the product zone.

## 3--Design and Construction:

A. Equipment shall be designed and constructed in such a manner that it can be readily cleaned.

B. All product contact surfaces shall be readily accessible for cleaning and inspecting and constructed of corrosion resistant materials.

C. All surfaces contacting product shall be smooth, free from pits, crevices, and scale and shall be capable of being so maintained.

D. All parts of the product zone shall be free of recesses, open seams, gaps, protruding ledges, inside threads, inside shoulders, bolts, rivets, and dead ends.

E. Bearings shall be located outside the product zone and the construction of these shall be such that lubricant cannot leak, drip, or be forced into the product zone.

F. Internal corners or angles in the product zone shall have a continuous and smooth radius of one-fourth inch or greater except that lesser radii may be used where necessary for proper functioning of parts or to facilitate drainage, provided such areas can be readily cleaned.

G. Equipment shall be self-draining or otherwise completely evacuated.

H. Horizontal ledges or frame members should be held to a minimum outside the product zone and should be of rounded or tubular construction, where possible, to prevent accumulation of debris and promote sanitation.

I. Equipment shall be so designed, constructed, and installed as to guard against injury to personnel from sharp edges, moving parts, electrical shocks, excessive noise, and other hazards. Safety or gear guards shall be removable to permit inspecting and cleaning.

J. All welding shall be continuous, smooth, even, and relatively flush with the adjacent surfaces.

K. Painted surfaces of equipment or components in or above the product zone are not acceptable.

L. All external surfaces that do not contact food product shall be free of open seams, gaps, crevices, and inaccessible recesses.

M. Where parts must be retained by nuts or bolts, fixed studs with wing nuts should be used rather than screws to a tapped hole.

N. Electric motors and other electric gear should be sealed or otherwise protected to prevent entry of water and product.

O. All gasketing and packing material shall be nontoxic, nonporous, nonabsorbent, and unaffected by food products and cleaning compounds.

#### 4--Installation:

A. Spacing from Floors, Walls, and Ceilings: All parts of stationary (or not readily movable) equipment must be installed far enough away from floors, walls, and ceilings to provide access for cleaning and inspecting. As an alternative, permanently mounted equipment may be sealed with a watertight seal to the adjacent structure. Wall mounted cabinets and electrical connections must be installed at least 1 inch from the wall or sealed watertight to the wall.

B. Water Wasting Equipment: Water waste equipment shall be installed so that waste water is delivered through an interrupted connection into the drainage system without flowing over the floor, or shall be discharged within a properly drained, curbed area. Cooking tanks, soaking tanks, chilling tanks, and other large vessels may be discharged across the floor for short distances to a drain after operations have ceased and product has been removed from the area.

C. Protection of Water Supply: An air gap shall be provided between the highest possible level of liquids in equipment and water supply pipes. Functional vacuum breakers must be provided in installations where submerged water lines are unavoidable. These must be of a type that can be checked easily to be sure they are working.

D. Valves: Valves on drainage outlets shall be readily cleanable and mounted flush with the bottom of the equipment. Overflow pipes shall be constructed so that all interior and exterior surfaces can be cleaned.

### Definitions

In order for these guidelines to be uniformly understood and applied, definitions of certain terms are as follows:

- Accessible - Shall mean easily exposed for regularly performed cleaning and inspecting with the use of simple tools such as those normally carried by cleaning personnel.
- Readily accessible - Shall mean easily exposed to sight and touch for regularly performed cleaning and inspecting without the use of tools.
- Removable - Shall mean that a component part shall be capable of being separated from the principal part with the use of simple tools such as a screw driver, pliers, or open-end wrench.
- Readily cleanable - Shall mean that the equipment can be cleaned with hot water, cleaning agents, and scrubbing implements normally used by cleaning personnel.
- Corrosion resistant material - Shall mean a material which maintains its original surface characteristics under prolonged influence of the normal components of its environment such as product, ingredients, ambient conditions, and cleaning and sanitizing materials.
- Acceptable materials - Shall mean those materials which have been found to be chemically acceptable by the Chemistry Staff and physically suitable for the purpose intended by Technical Services.
- Sealed - Shall mean having no openings that will permit the entry of product, dirt, or moisture.
- Product Zone - Shall mean all surfaces of the equipment to which product or ingredients may normally be exposed directly or indirectly.
- Nonproduct Zone - Shall include all surfaces of the equipment outside the product zone.
